crane and excavator attachments

# Clamshell Bucket without Rotator C25VE

## Special and Custom Solutions

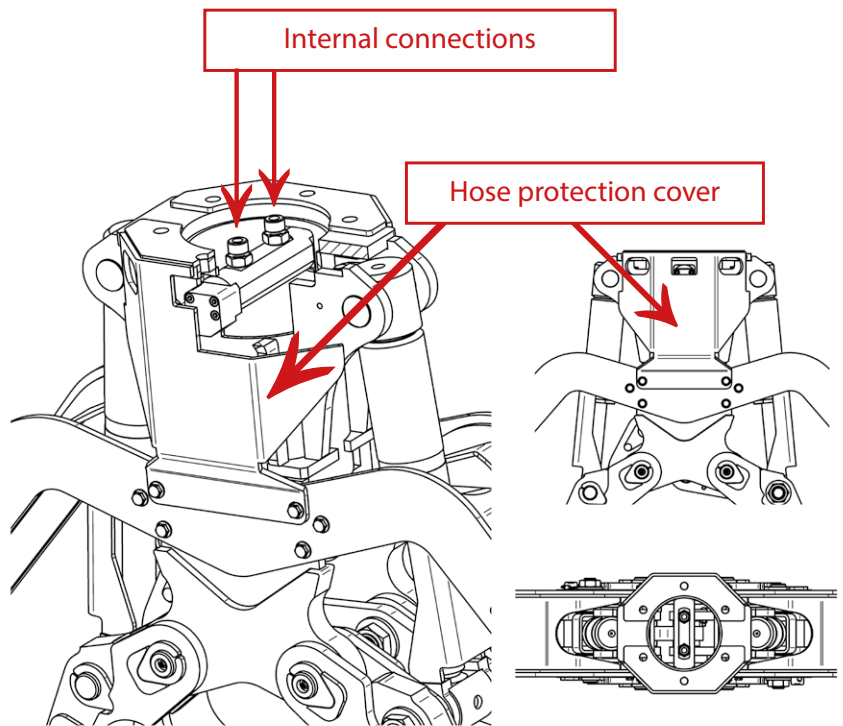

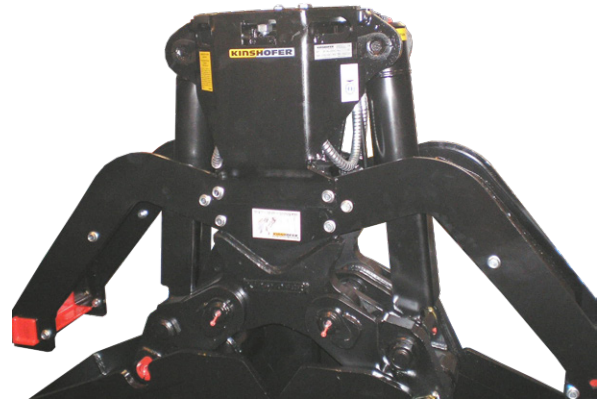

700002/2008

The C25VE from **KINSHOFER** is used to excavate concrete-retaining walls, that will be refilled with concrete afterwards. The trenches are dug up to a depth of 10m. To maintain the stability of the trench it is filled with a special fluid. The grab is working constantly in that fluid.

In order to protect the hoses, the hydraulic connections have been relocated into the interior of the grab. The connections to the hydraulic cylinders are protected by an additional protection cover.

The grab extension is manufactured by the customer in Spain especially for that task.

The shells are 325 mm / 12.8 in wide.

We reserve the right to amend specifications without prior notice! **KINSHOFER** GmbH, D-83607 Holzkirchen, Germany
